

Study of features and functions of Time Doctor

Download & run the file below to install the Time Doctor 2 app on any computer that you want to track.

The app will record activities on any computer where it's installed.

**Download Time Doctor 2 app for Windows** 
v3.12.100 - Compatible with Windows 10 or newer

 Windows  Mac OS X  Ubuntu

You can also share this public download link if someone other than you will install the app

IMPORTANT: The file should not be renamed before it is installed

Admin Features

1. **Dashboard:**
 - Overview of all users and their activities.
 - Real-time monitoring of user activity.
 - Summary of total hours worked by users.
2. **User Management:**
 - Add, remove, and update user information.
 - Assign users to different projects or tasks.
 - Set permissions and roles for users.
3. **Time Tracking:**
 - View detailed reports of time spent on various tasks/projects.
 - Track billable and non-billable hours.
 - Set and manage deadlines for tasks and projects.
4. **Project Management:**
 - Create and manage projects and tasks.
 - Assign tasks to users and set priorities.
 - Track the progress of projects.
5. **Reports and Analytics:**
 - Generate reports on user productivity, time usage, and project progress.
 - Export reports in various formats (CSV, PDF, etc.).
 - Visualize data using charts and graphs.
6. **Billing and Invoicing:**
 - Generate invoices based on tracked time and billable rates.
 - Manage client billing information.
 - Send invoices directly from the system.

User Features

1. **Time Tracking:**
 - Start, pause, and stop timers for tasks.
 - Manually log time entries.
 - View daily, weekly, and monthly summaries of tracked time.
2. **Task Management:**
 - View assigned tasks and projects.
 - Mark tasks as complete and update task status.
 - Add comments or notes to tasks.
3. **Activity Monitoring:**
 - Track application and website usage.
 - View detailed activity logs.
 - Get insights into productive vs. nonproductive time.
4. **Reports:**
 - View personal productivity reports.
 - Analyze time spent on different tasks and projects.
 - Export personal time tracking data.
5. **Notifications and Reminders:**
 - Receive reminders for task deadlines and breaks.
 - Get notifications for new task assignments and project updates.

Tech Stack Considerations

For a backend system similar to Time Doctor, you might consider using the following technologies:

- **Backend Framework:** Django, Flask (Python), or ASP.NET (C#)
- **Database:** PostgreSQL, MySQL, or MongoDB
- **Real-time Communication:** WebSockets, SignalR (for real-time monitoring)
- **Authentication:** OAuth2, JWT
- **Frontend Framework:** React, Angular, or Vue.js
- **Mobile Development:** React Native, Flutter, or native development for iOS/Android
- **Cloud Services:** AWS, Azure, or Google Cloud for hosting and scalability

Two types of tracking—one with user control and one without—requires different approaches for data collection, user interaction, and privacy considerations.

1. Tracking with User Control

This type of tracking requires user interaction to start, pause, and stop the tracking process. It's user-initiated and respects user preferences, providing flexibility and transparency.

Key Features

- **Manual Start/Stop:** Users can start, pause, and stop tracking.
- **User Notifications:** Inform users about tracking status.
- **Data Editing:** Allow users to edit tracked time entries.
- **Privacy Controls:** Users can choose when to be tracked.

1. **UI Elements:**
 - Provide buttons for starting, pausing, and stopping tracking.
 - Display current tracking status and time elapsed.
2. **Event Handling:**
 - Implement event listeners for button clicks to control tracking.
3. **Local Data Storage:**
 - Store tracking sessions locally, including start time, end time, and duration.
4. **Synchronisation:**
 - Sync tracked data with the server at regular intervals or when tracking stops.
5. **User Notifications:**
 - Notify users of tracking status changes (e.g., tracking started, paused, stopped).

2. Tracking without User Control

This type of tracking runs automatically without requiring user interaction. It continuously monitors and logs activity, useful for passive monitoring.

Key Features

- **Automatic Start/Stop:** Tracking starts when the user logs in and stops when they log out.
- **Background Tracking:** Runs in the background without user intervention.
- **Continuous Monitoring:** Constantly logs activity data.
- **Privacy Concerns:** Ensure compliance with privacy regulations and inform users of tracking.

1. **Background Service:**
 - Implement a background service that starts with the system/user login.
 - Continuously monitor and log activity.
2. **Local Data Storage:**
 - Store tracked data locally in a structured format (e.g., SQLite).
3. **Synchronisation:**
 - Periodically sync data with the server in the background.
4. **Privacy and Transparency:**
 - Inform users about continuous tracking and ensure compliance with privacy laws.

Synchronisation and Handling Both Tracking Types

1. **Unified Sync Endpoint:**
 - Develop a unified endpoint on the server to handle data from both tracking types.
2. **Data Segmentation:**
 - Tag data entries to distinguish between manual and automatic tracking.
3. **Synchronisation Logic:**
 - Implement logic to handle data from both tracking types, ensuring no conflicts and accurate logging.

Types of trackings :

● Manual Tracking ● Automated Tracking ● Project-Based Tracking ● Activity-Based Tracking ● Location-Based Tracking	● Idle Time Tracking ● Screen Time Tracking ● Break Time Tracking ● Billable vs. Non-Billable Time Tracking ● Integrated Tracking

Integrations

Integrations & Add-ons

These Time Doctor integrations allow you to connect your favorite apps so you can conveniently manage projects in one single interface.

Service	Description
ADP	Automate employee payroll.
Asana	Track time on tasks and projects.
Avaza	Track time in project management.
Azure DevOps	Track developer tasks.
Bitbucket	Track issues.
Bitrix24	Track tasks and projects.
Breeze	Track time with integration.
BugHerd	Track tasks.
Citrix	Deploy for time management.
ClickUp	Add time tracking to tasks.
Evernote	Track to-dos.
Flow	Track tasks with one click.
FreshBooks	Track tasks.
Freshdesk	Close tickets faster.
Freshservice	Track support time.
G Suite	Track time on Google Apps.
Genesys	Improve productivity.
GitHub	Track issues and repositories.
GitLab	Track issues and merge requests.
Glip	Track time with integration.
Gusto	Upload payroll data.
Help Scout	Track email time.
HubSpot	Track activities.
Intercom	Track conversations.
Intervals	Improve time tracking.
Jira	Track issues.
LiquidPlanner	Improve scheduling.
Mavenlink	Track project time.
MeisterTask	Increase productivity.
Microsoft To Do	Manage tasks better.

Monday.com	Add time tracking.
Notion	Improve productivity.
Odoo	Track projects and tasks.
Microsoft 365	Track time automatically.
Ora	Track project time.
Payoneer	Upload payroll data.
PayPal	Upload payroll data.
Phabricator	Track time and projects.
Pipedrive	Monitor time.
Pivotal Tracker	Send time tracking data.
Plutio	Track tasks.
Podio	Reveal time use.
Process Street	Track time.
Redbooth	Track tasks and projects.
Redmine	Track projects and issues.
Salesforce	Track activities.
Sentry	Track time with integration.
Slack	Enable time tracking.
Spiceworks	Track Help Desk tickets.
Taiga	Monitor progress.
Teamwave	Track tasks.
Teamwork	Track tasks.
Todoist	Track projects and tasks.
Trainual	Track training tasks.
Trello	Track cards and boards.
Unfuddle	Improve response rates.
Wise	Upload payroll data.
WordPress	Track management time.
Worksection	Improve time tracking.
Wrike	Track tasks and projects.
Zapier	Use automated workflows.
Zendesk	Enable time tracking.
Zenkit	Track tasks with Zapier.
Zoho	Track time.
Zoho Desk	Track tickets.
Zoho Projects	Track tasks and projects.
Zoho Sprints	Track tasks.

Here are some common features of time tracking and productivity monitoring tools :

Feature	Description
Time Tracking	Track the amount of time spent on tasks and projects.
Screenshots	Take periodic screenshots of the user's screen.
Screencasts	Record video of the user's screen activity.
Activity Monitoring	Monitor keyboard and mouse activity to gauge productivity.
Website and App Usage	Track which websites and applications are being used.
Idle Time Detection	Detects periods of inactivity or idle time.
Project Management	Manage tasks and projects directly within the tool.
Integrations	Integrate with various project management and productivity tools.
Manual Time Entry	Allow users to manually enter time worked.
Automatic Time Capture	Automatically track time spent on various activities.
Reports and Analytics	Generate detailed reports and analytics on time usage and productivity.
Payroll Management	Automate payroll processes based on tracked time.
GPS Tracking	Track location and time spent at various locations.
Break Time Tracking	Track the duration and frequency of breaks.
Team Dashboard	Provide a dashboard for managers to oversee team productivity.
Alerts and Reminders	Set alerts and reminders for various activities and breaks.
Billing and Invoicing	Generate invoices based on tracked billable hours.
Task Prioritization	Prioritise tasks and manage workloads effectively.
Data Security	Ensure data is secure and compliant with privacy laws.
Customizable Settings	Customise tracking settings to fit organisational needs.
Mobile App	Access time tracking features from mobile devices.
